

# Von Morris's New Stainless Steel Screen Door Lock

Handing is now easy! Simply remove the face plate, and rotate the latch. Its that easy, you no longer have to open the latch case to change the handing.

The new Stainless Steel lock allows for increased spring strength for knob/lever hub preventing lever sagging. Separation of springing for knob/lever hub and latch bolt allows for softer spring strength in latch bolt for easier latch retraction when door closes.

Stainless steel case. Guaranteed not to rust.

Reduced hub rotation, now only 28° for full latch refraction, compared to 45° for existing Brass and Iron cases.

Smoother deadbolt operation.
